

From cash visibility to action

ERP and bank data, reconciled continuously.

-
- Live cash position
 - Prioritized actions
 - Industry benchmarks

Finance teams decide on a cash picture that is already out of date.

ERP knows what is owed. The bank knows what arrived. Nothing puts them together in time to act — and no company can see its own numbers in context.

One product, two compounding effects: faster cash decisions today, and industry insights that improve for every member over time.

The next screens show each of these three effects as they appear inside the product.

Invoice INV-148 · SEK 78,450 · 45 days overdue

High impact

No matching payment

Recommended: Contact Customer A

Invoice INV-148 is 45 days overdue, no matching payment has been found, and the expected receipt affects Friday's projected cash position.

Invoice & customer summary

Invoice amount	SEK 78,450	Due date	20 July 2026
Days overdue	45 days	Open exposure	SEK 78,450
Historical median delay	24 days	Last payment delay	15 days
Matching payment	None	Payment terms	Net 30

Payment behaviour — delay by invoice (days)

Why this action?

- Delay is 45 days — nearly double the 24-day historical median.
- No matching payment found in Open Payments.
- Expected receipt affects Friday's projected cash position.

Subject Payment reminder — INV-148

Message

Hi team,

Invoice INV-148 for SEK 78,450 is now 45 days past its due date of 20 July 2026, and we have not received a matching payment.

Could you confirm the expected payment date?

Best regards,

Secure Aggregation & Benchmarking

How Kvitt turns each member's financial signals into an industry-wide reference, without exposing any single company's data.

Each company receives more intelligence than it contributes, without exposing company-specific data.

Aggregates are released only where at least five members contribute to a segment. Below that threshold the segment is suppressed, so no single company's position can be derived.

Industry benchmarks

Professional services

Professional services · Sweden · Based on 128 contributing members · Updated weekly

Seasonal cash-flow pattern

July trough is 14 points deeper than the industry median — a recurring pattern worth funding ahead of, not reacting to.

Customer payment delay by industry

Industry	Median delay	Members
Construction	34 days	41
Public sector	29 days	27
Manufacturing	22 days	63
Logistics	21 days	19
Retail	18 days	52
Energy	Suppressed	3

Energy is hidden because only 3 members contribute. Segments are released at 5 or more.

The remaining product surfaces

Four categories we have not walked through. Each runs on the same two inputs - reconciled ERP and bank data - and feeds the same two outputs: a prioritized action, and a contribution to the benchmark.

Cash Forecast

CFO asks for this

Due dates lie. The curve is built from each customer's observed payment behaviour — and, where there is no history, from that industry's benchmark delay. Forecasting no single company can do on its own data.

Receivables

CFO asks for this

Customer	Amount	Predicted payment	Risk
Customer A	SEK 78,450	45 days overdue	High ●
Customer D	SEK 122,000	Sep 12 · predicted	Medium ●
Customer F	SEK 46,300	Sep 8 · predicted	Low ●
Overdue across 28 customers			SEK 3.76M

Where the action queue gets its raw material. Every open invoice is scored against the customer's own history and its industry benchmark, so collection effort goes only to the invoices that actually move the buffer.

Payables

Supporting surface

Supplier	Amount	Due	Recommendation
Supplier B	SEK 42,000	Tomorrow	Hold 4 days ●
Supplier D	SEK 88,000	Sep 15	Pay on time ●
Supplier E	SEK 19,400	Sep 9	Pay on time ●
Buffer after this payment run			SEK 1.62M

The only side of the buffer a company fully controls. Kvitt ranks which payments can slide without breaching agreed terms — deterministic rules, never a model's guess, because a damaged supplier relationship is the cost of being wrong.

Reports

Supporting surface

Report	Period	Basis	Status
Board cash pack	Monthly	ERP + bank	Ready ●
Bank covenant report	Quarterly	ERP + bank	Ready ●
Benchmark position	Weekly	128 members	Ready ●
Every figure traceable to its source row			Audit trail on

Board- and bank-ready. Every figure traces back to the ERP row and the bank transaction behind it, and every benchmark states how many members it was computed from — the appendix's audit trail, packaged as a deliverable.
